DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on May 25, 2004 has been entered.

Claims 1, 3, 4, 7, 9, 10, 13-15 and 20-30 are currently pending.

Examiner recommends cancellation of withdrawn claims 7, 9, 10, 23 and 24.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the substrate must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 1, 3, 4, 13-15, 20-22 and 25-30 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

It appears that Applicant has failed to disclose an embodiment having a substrate, the p-well fabricated within the substrate and a photoreceptor fabricated within the substrate and outside the p-well. Nowhere in the original disclosure is the term "substrate" used or shown.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 1, 3, 4, 20, 22, 25, 26, 28 and 29 are rejected under 35 U.S.C. 102(e) as being anticipated by Merrill et al. (U.S. Patent 6,369,853).

Regarding claims 1, 3, 4, 20, 22, 25, 26, 28 and 29, Merrill et al. disclose (see Figs. 6 and 7) an active pixel sensor (APS) comprising: a substrate (110); a p-well (128) fabricated within the substrate; a photoreceptor (at 122) fabricated within the substrate and outside the p-well; an NMOS frame shutter (transistors 84, 88, see col. 7, lines 28-

35) fabricated within the p-well; and an APS readout (92, 94, 96) for receiving charges from the NMOS frame shutter. Merrill et al. also disclose (see Figs. 6 and 7) the frame shutter includes sample and hold, and reset circuits, which further comprises NMOS transistors.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 13-15, 21, 27 and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Merrill et al. in view of Yang et al. ("A Snap-Shot CMOS Active Pixel Imager for Low-Noise, High-Speed Imaging", published December 1998).

Regarding claims 13-15, 21, 27 and 30, Merrill et al. disclose the claimed invention as set forth above. Merrill et al. do not specifically disclose a pinned photodiode. Yang et al. teach (see column 1) that active pixel sensors may also comprise pinned photodiode pixels. Thus, Yang et al. recognize that pinned photodiodes are typical in the art. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to provide a pinned photodiode in the apparatus of Merrill et al. in view of Yang et al. as desired for improved response.

Response to Arguments

9. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
